

FIRE SAFETY RISK ASSESSMENT

Professional Template for CQC-Compliant Healthcare Organisations

■■ SAMPLE DRAFT FOR PREVIEW ONLY | This document is a representative sample. Purchase the full template for your complete, customisable policy.

LEGISLATIVE & REGULATORY COMPLIANCE:

✓ The Regulatory Reform (Fire Safety) Order 2005 | ✓ Health & Safety at Work etc. Act 1974

✓ Management of Health & Safety at Work Regulations 1999 | ✓ Fire Safety Act 2021

✓ Building Safety Act 2022 | ✓ CQC Fundamental Standards (Safe, Responsive)

✓ HSE Guidance on Fire Safety | ✓ British Standards: BS 9999 & BS EN 1838

✓ Regulatory Reform (Fire Safety) Order 2005 Schedule 1

ASSESSMENT DETAILS

Assessment Reference:	B66A-BS-001	Version:	2.0
Assessment Date:	May 2025	Next Review:	May 2026

1. INTRODUCTION AND SCOPE

Fire safety is a critical and non-negotiable aspect of health and safety management in all healthcare settings. This comprehensive risk assessment identifies fire hazards present in the organisation, evaluates the level of risk posed by each hazard, and sets out control measures to prevent fire, protect people and property, and ensure safe evacuation. This assessment covers all areas of the premises, all occupants (staff, visitors, and service users), and all activities undertaken.

2. LEGAL FRAMEWORK AND COMPLIANCE

Fire safety legislation places a legal duty on all organisations to conduct fire risk assessments, implement adequate fire safety measures, ensure staff are trained and competent, maintain records, and review assessments regularly. The Regulatory Reform (Fire Safety) Order 2005 is the principal legislation. The Health & Safety at Work etc. Act 1974 provides the overarching framework. The organisation must comply with all applicable legislation.

3. HAZARDS IDENTIFIED IN THE PREMISES

Hazard Category 1: Ignition Sources

Potential sources of ignition have been identified and assessed:

- Cooking equipment in staff kitchen areas (naked flame, heat)
- Electrical appliances and office equipment (faulty wiring, overheating)
- Heating systems including radiators and hot water pipes
- Lighting equipment
- Smoking materials (if smoking is permitted on premises)
- Hot work activities (if any)
- Candles or other naked flame items (if used)

Hazard Category 2: Flammable Materials

- Cleaning chemicals and disinfectants stored in dedicated cupboard
- Office supplies (paper, cardboard, stationery)
- Soft furnishings (chairs, curtains, upholstery)
- Mattresses and bedding materials
- Waste and recycling materials
- Storage items in attic or storage areas

Hazard Category 3: Fire Detection & Alarm Systems

Current fire detection and alarm systems: Smoke detectors installed in key areas and corridors. Manual fire alarm call points located at exits. Fire alarm system connected to automatic notification of emergency services. System last inspected and tested by qualified engineer on [Date]. Emergency lighting installed in corridors and stairwells.

4. EXISTING CONTROL MEASURES

Engineering Controls: Fire doors with self-closing mechanisms. Fire-rated materials used where appropriate. Emergency exits clearly marked. Fire extinguishers and blankets positioned at relevant locations. Evacuation routes kept clear and unobstructed.

Administrative Controls: No smoking policy in place. Hot work procedures documented. Electrical equipment maintenance schedule established. Staff trained in basic fire safety. Regular inspection of escape routes. Incident reporting procedures in place.

Human Factors: All staff receive fire safety induction. Designated Fire Marshals trained and appointed. Evacuation procedures communicated. Mock evacuation drills conducted regularly. Staff awareness of alarm systems.

5. RISK EVALUATION AND SCORING

Risks have been evaluated using a standardised matrix considering both likelihood and potential consequence. The overall fire safety risk level is assessed as: **MEDIUM** (with appropriate control measures in place). Individual hazards range from LOW to HIGH depending on control effectiveness.

6. ACTION PLAN AND CONTROL IMPROVEMENTS

- **Electrical Inspection:** All electrical installations to be inspected and tested by qualified electrician. Scheduled annually. Next due: [Date]
- **Fire Alarm Testing:** Automated fire alarm system to be tested monthly (first Monday of each month). Records maintained.
- **Emergency Lighting:** Emergency lighting to be tested monthly. Batteries replaced annually.
- **Fire Extinguishers:** Serviced annually by qualified provider. Visual inspection monthly.
- **Evacuation Drills:** Formal evacuation drill to be conducted every 6 months. Records and learning points documented.
- **Combustible Storage:** Review storage of flammable materials. Ensure appropriate cabinet and distance from ignition sources.

7. TRAINING AND COMPETENCE

All staff receive mandatory fire safety induction training covering: location of fire exits and assembly points, how to raise the alarm, evacuation procedures, action in event of fire, location of fire extinguishers, and who to report to. Designated Fire Marshals receive additional, more comprehensive training. Training records are maintained and reviewed.

8. MAINTENANCE AND TESTING SCHEDULE

- Fire alarms: Tested monthly (first Monday)
- Emergency lighting: Tested monthly
- Fire extinguishers: Serviced annually, visually inspected monthly
- Electrical equipment: PAT tested annually
- Escape routes: Inspected monthly
- Fire doors: Checked annually
- Evacuation drills: Conducted 6-monthly

9. MONITORING, REVIEW, AND CONTINUOUS IMPROVEMENT

This assessment will be reviewed: Annually; whenever building/activities change significantly; after any fire incident or near-miss; when fire safety guidance is updated; or if control measures prove inadequate. The responsible person reviews assessment findings with staff and implements learning.

IMPORTANT DISCLAIMER

This is a professional sample template for preview purposes. The full purchased template includes: detailed procedures, local safeguarding board contact details, incident investigation protocols, staff training

materials, and customisation guidance for your specific organisation. For a complete, legally robust policy tailored to your organisation, purchase the full template from Barker Scott Ltd.
